Education

University of Parma

MASTER'S DEGREE IN COMPUTER SCIENCE (EXPECTED)

Parma, Italy

Sep. 2024 - Jul. 2026

University of Parma

BACHELOR'S DEGREE IN COMPUTER SCIENCE

Parma, Italy

Sep. 2021 - Jul. 2024

Grade: 110/110 *cum laude*

Title: "Valutazione sperimentale sull'individuazione automatica di errori di programmazione nel codice generato da LLM"

Supervisor: Prof. Enea Zaffanella

Co-supervisor: Prof. Vincenzo Arceri

Keywords: *Static Analysis, AI, LLM, Software Verification and Validation*

Interests

My primary academic interests lie in Software Verification, particularly in Static Analysis by Abstract Interpretation. I am currently engaged in the development of a static analyzer for the R programming language. This practical work builds upon my previous experience, which includes an internship where I worked on integrating the PPLite library into the Mopsa static analyzer, further enhancing my technical skills in this field. My bachelor's thesis also focused on evaluating the quality of source code generated by Large Language Models (LLMs) through static analysis.

Additional experience

University of Parma

TUTOR (LOGIC AND DISCRETE STRUCTURES)

Parma, Italy

Sep. 2025 - Jan. 2026

- Academic support: provide assistance to first-year undergraduate students in understanding the theoretical concepts of logic and discrete mathematics.
- Practical exercises: guide students in solving problems related to set theory, algebraic structures, natural and structural induction, as well as propositional and predicate logic, helping them consolidate the necessary practical skills.
- Providing resources: offer supplementary materials and useful resources for further exploration of the topics covered in the course (available at <https://github.com/unipr-org/tutorati/tree/main/EdL>).

University of Parma

TUTOR (ALGORITHMS AND DATA STRUCTURES)

Parma, Italy

Feb. 2025 - June 2025

- Conceptual support: assist students in understanding fundamental algorithmic concepts, data structures, and their applications.
- Problem-solving sessions: guide students through exercises involving sorting, recursion, dynamic programming, and common data structures like stacks, queues, linked lists, trees, and graphs.
- Supplementary materials: provide additional learning materials and practical examples to reinforce comprehension (available at <https://github.com/unipr-org/tutorati/tree/main/ASD>).

University of Parma

TUTOR (LOGIC AND DISCRETE STRUCTURES)

Parma, Italy

Sep. 2024 - Jan. 2025

University of Parma

INTERNSHIP

Parma, Italy

Oct. 2023 - Jan. 2024

- Examined the Mopsa static analyzer (<https://mopsa.lip6.fr/>) through a series of benchmarks (coreutils-benchmarks, juliet-benchmarks).
- Integrated the PPLite library (<https://github.com/ezaffanella/PPLite>) into the framework.
- Created a docker container to automate the installation ([manueldiagostino/mopsa:pplite](https://github.com/manueldiagostino/mopsa:pplite)).

Tools and Software

Tree-sitter grammar for StrictDoc

From June 2025

A Tree-sitter grammar for the StrictDoc language. This tool enables robust and efficient parsing of StrictDoc files, allowing for features like syntax highlighting, code navigation, and structural analysis in compatible text editors and IDEs. The grammar is designed to work with the Tree-sitter parsing framework, improving the developer experience when working with StrictDoc requirements files (<https://github.com/manueldiagostino/tree-sitter-strictdoc>).

Deep Neural Network Library

From May 2024

A flexible C++ library for building, training, and using deep neural networks. Modular, easy-to-use, and high-performance. The library supports various neural network architectures, efficient training tools, and robust inference methods (<https://github.com/unipr-org/deep-neural-network>).

Grants

Research participant, “LLMs Meet Static Analysis: improving quality and reliability of AI-generated code”

ISCRA PROJECT (CLASS C), CINECA

From Jan. 2024

Principal Investigator: Prof. Vincenzo Arceri. The goal of the project is to conduct an extensive quality and safety evaluation of the code generated with some of the most popular and open-source LLMs employing static analyzers, that can detect vulnerabilities and run-time errors statically, without executing the code. Once this information is available, it will be included in the code-generation task, to guide the LLM itself to produce a more precise and safe output, in which static analysis is somehow introduced in the pipeline of the code-generation task.

Conferences, workshops and school participations

- 2025 **Participant**, CSV 2025, 4th Challenges of Software Verification Symposium
- 2024 **Participant**, Lipari Summer School on Abstract Interpretation
- 2024 **Participant**, CSV 2024, 3rd Challenges of Software Verification Symposium

Venice, Italy

Lipari, Italy

Venice, Italy
